

Bevi & Go

Admin / Owner Manual

Setup, daily operations, reports, and troubleshooting.

© 2026 Bevi & Go

1. Getting started

Sign in with your staff email at the login page. Your role (**Admin** or **Developer**) unlocks the full sidebar. If anything is missing from your sidebar, open **Settings** → **Staff & Roles** and confirm your account.

2. Setting up the menu

Open **Catalog** → **Menu & Recipes** and create categories first (e.g. Espresso, Milk Tea, Pastries). Tag a category with *Prints label* so drink labels print automatically at checkout.

Add each drink under its category with a price and an optional description. Configure options (sizes, milk, sugar, add-ons) so the POS shows a customize sheet.

Attach a **recipe** to every drink — this is what deducts stock when you sell and restocks on refund/void.

Open **Catalog** → **Inventory** and add raw materials (milk, syrups, cups). Set par levels so low stock warnings appear.

Use **Catalog** → **Bundles** for time-limited combos with a fixed price.

3. Customers & discounts

Customers → **Customers**: register a customer. The system creates a unique loyalty code and QR. Print or share the QR — customers can scan it to self-order from their phone.

Customers → **Discounts**: build coupons or percentage promos. The POS lets baristas apply a manual discount at checkout; the discount is recorded in reports.

4. Daily operations

- **Sales** → **POS** — taking orders (mostly the barista's screen).
- **Sales** → **Today's Orders** — live list of today's tickets. Reprint, void, or refund.
- **Sales** → **End of Shift** — closing summary the barista submits with cash count.
- **Sales** → **EOS by Date** — review any past shift.

5. Payroll

Staff clock in/out from **Payroll** → **Timeclock**. View aggregate hours in **Timeclock Report**. Generate the period payslip in **Payslip**.

6. Reports

Reports → **Reports** has three tabs: *Per Order*, *Per Item*, and *Discounts*. Every row shows the Order # and the unique Order ID for full traceability. Filter by date or by Order # / Order ID. Export to CSV or push directly to Google Sheets (creates one spreadsheet with three tabs).

Reports → **Sales Summary** is the aggregate view — totals, top sellers, payment-method breakdown.

7. Settings & security

- **Payment Methods** — enable cash, card, GCash, transfer, etc. Add card-processing fees if needed.
- **Print Settings** — receipt size, header text, label format, paper width.
- **Staff & Roles** — invite a teammate by email and assign *admin* or *barista*. Only developers can add other developers.
- **Audit Log** — every sensitive change (role grant, refund, void, settings update) is recorded with who and when.

8. Refunds, voids & mistakes

Open the order in **Today's Orders** and choose **Refund** or **Void**. Stock is restocked using the recipe and loyalty points are reversed (earned subtracted, redeemed re-credited). Both actions are admin-only and appear in the audit log.

9. Quick checklist

- Menu items have prices and recipes.
- Inventory has par levels.
- At least one cash payment method is active.
- Print Settings match your printer's paper width.
- Each barista has a role assigned in Staff & Roles.
